Idea 1: A game where words are randomly jumbled in a 12 x 12 grid, and the main goal of the game is to chain as many words together as possible to attain the score requirement to move on to the next level of the game. The amount of words chained gives a multiplicative bonus to their total score, which will encourage them to look carefully through the grid in order to achieve the highest score possible. Various items can be attained after reaching certain score goals, or chaining together a high number of words. Items can increase probabilities of words grouping together, allowing for higher word chains to be achieved, or giving the player abilities to shuffle the grid to rearrange letters for a better chance at the amount of words that they can chain.

Idea 2. The player takes on the role of an adventurer in the aftermath of an apocalypse who's main goal is to travel to unknown territories such as caves, forests, or ruined cities. The characters main reason for this is to provide information for potential future settlements. The difficulty of the surveying missions increase as more are completed, with more enemies showing up to prevent you from completing the survey. As the difficulty increases, you also gain access to better loot from completing the missions, and you get better tools to deal with the threats that may attempt to interfere. The player will receive bonuses or penalties based on how well they have surveyed the map.

Idea 3. You take control of the manager of a failing delivery company who refuses to let it go bankrupt. Through sheer will, the player manages to save the company from falling bankruptcy, but the question still stands, how will you avoid falling into the same situation again? Make reforms to your delivery company, purchase new delivery equipment to replace the old ones, hire new workers to replace the slacking ones, and when you have the necessary funds, construct new postal offices to expand your reach across the country. Manage your newly reformed company carefully, unless you'd like to end up within the grasps of bankruptcy once more.

Idea 4. Take on the role of a snake oil salesman during the 1880's, selling tonics and elixirs that claim to cure all and even reverse death, that in reality, do little to nothing. Come up with new and clever ways to scam people out of their cash, with each new elixir having more and more ridiculous positive health claims. When the people start to catch onto the façade of your products, pack up your sales cart and skip town to avoid the beating of an

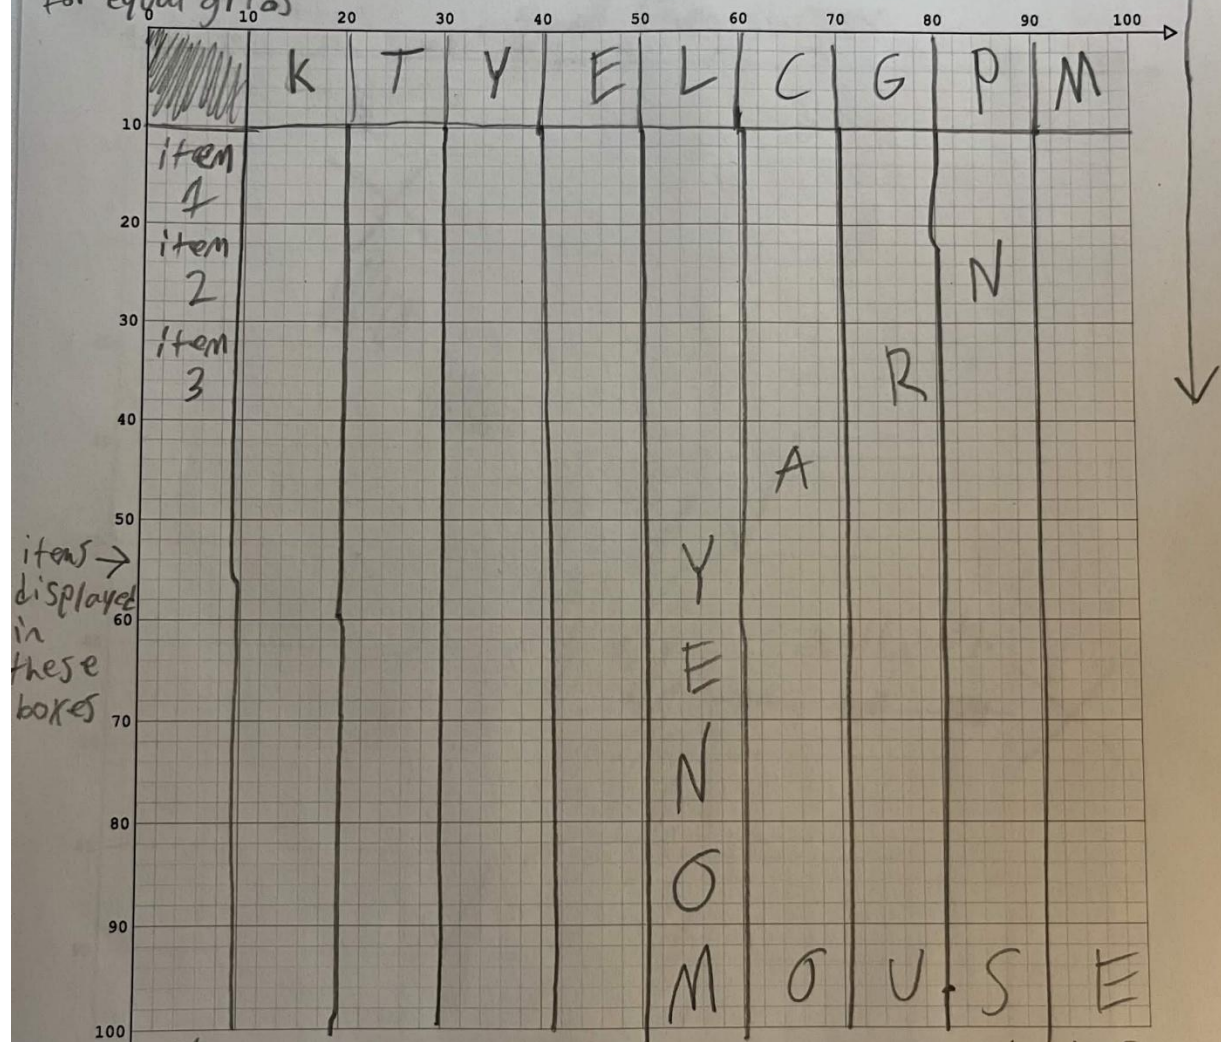

angry mob. Staying too long after people find out about your scam may result in you having to retire early.

Idea 5. A game where the player controls a restless skeleton that has been recently reanimated from its slumber from the cemetery. Wanting to blend in with society once again, it lurks around a small town, seeking to steal the body of a random civilian. Upon successfully doing so during the night, the player must quickly learn about the life of the civilian's body that they stole in order to avoid suspicion from their family, if they have one. If the player is successful with blending in for a full week, their skeleton bonds with the body and they can live out the rest of their reanimated life. If the people around the player are quick to catch on that the person they once knew is not them anymore, the player will be imprisoned and discovered to be a skeleton possessing a body, and they will lose the game.

# Idea 1 Sketch

Letters from top grid fall down words, will attempt to make word if none are present

box blacked out for equal grids

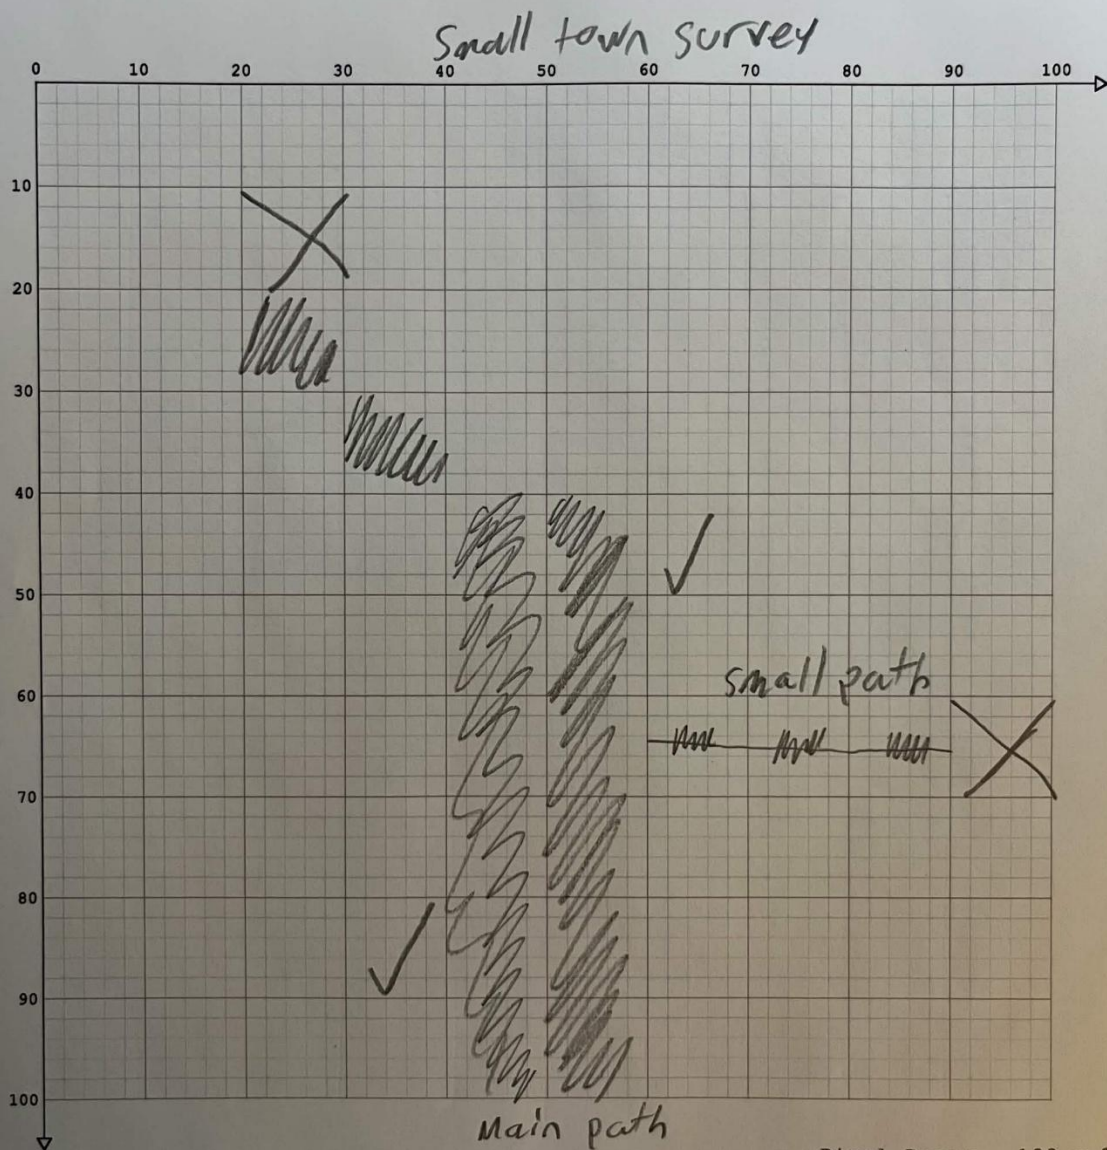

items displayed in these boxes

Player can only choose one starting letter, either picking mouse, or chaining money and yarn for a higher score

Pixel Paper - 100 x 100  
Graph Paper for Screen Coordinates

# Idea 2 Sketch

✓ = surveyed house

X = unsurveyed house
